

Put yourself on the map

Further widening the wireless information capabilities of the Nokia 9210 Communicator, people on the move can use a new, easy and time saving way to find their destinations with the Genimap AddressFinder service.

Being in the right place at the right time

When looking for the way to an important destination in a hurry, the new Genimap AddressFinder makes finding destinations easy.

Genimap AddressFinder works like a guide, finding the selected place by name or address. Users can see a map showing the location of the desired address on their mobile phone.

The location is displayed on three different map levels. The first level shows the approximate location in the municipality. The second level reveals in which part of the town the location is. The third level pinpoints the exact location within a few blocks.

Genimap AddressFinder is like a real map in miniature, which can be scrolled up and down without page breaks.

Genimap AddressFinder also includes a

yellow pages directory service making it possible to get a service or company location marked straight away on a map.

The Nokia 9210 Communicator has a large, colour display that makes Genimap AddressFinder a delight to use.

Direct access to services

The usage of mobile phones is changing from pure voice communications to accessing different types of services.

Nokia 9210 Communicator

The availability of particular products and services may vary by region. Please check with the Nokia dealer nearest you. Some features are network dependent. Please check the availability of WAP services with your network operator and/or WAP service provider. Use of Internet based applications requires Internet connection. Nokia takes no responsibility on the content of location services. The content should not be relied on for life saving purposes or on other occasions when there is an emergency involved.

The concept of the phone is expanding and making services an integral part of the user experience.

Including WAP and Web service bookmarks into the phones makes it easier for the consumers to start using mobile services. Selecting the service offerings according to the needs and interests of the users of each phone category also adds to user satisfaction. Consumers can enjoy interesting services that are easy to access and at their fingertips ready to use.

For mobile service providers and application developers, this opens up a new direct channel to reach potential customers.
