

Benefits of the Nokia One solution

Many corporations today face the problem of staying connected. We all need access to our e-mail, address book, calendar and other information sources. Being away from our desk is no longer a problem – business critical information is available where and when we need it. Nokia One is a mobile solution that increases productivity. Nokia One provides constant access to corporate information services.

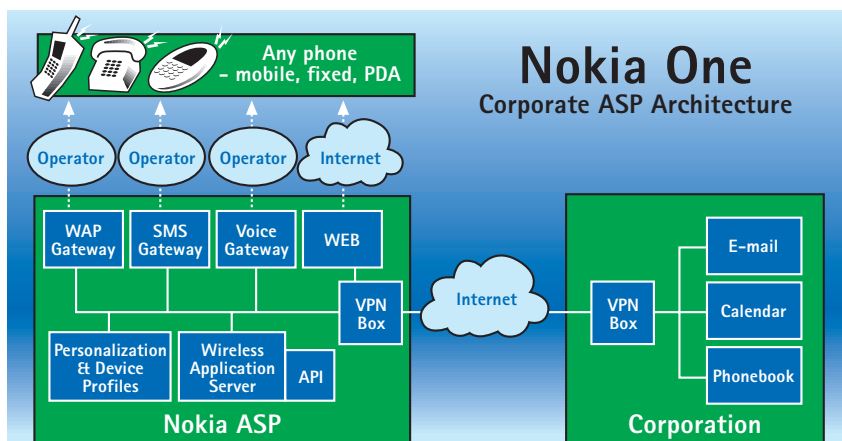

When out of the office, you can:

- Send and receive your corporate e-mail
- Schedule meetings and appointments
- Use corporate directories

Nokia One brings corporations a rapid return on investment in several ways. First of all, productivity increases, as people can use previously unproductive times to manage their e-mail. Secondly, it speeds up reaction time, as employees can be notified of specific messages and react to time critical issues faster. Thirdly, it will bring the corporation direct cost savings from reduced dial-up costs, as checking your e-mail with Nokia One is less expensive than downloading your mail header via a dial-up connection. Nokia One is much faster than turning on your laptop, dialing in and downloading your email. Corporations may even find that some employees no longer need their laptop, resulting in indirect cost-savings.

As a hosted service, Nokia One offers a fast and low-risk way to start learning about the potential of mobile solutions to improve your business.

- Pay as you use
- Operational within 4–5 weeks;
 - Set-up effort on the corporate customer side approx. 4 working days
- Includes SMSC connections, VPNs, Operations Centers
- Global access network
