NOKIA ONE, MOBILE CONNECTIVITY SERVICE is an effective means of connecting your employees to desktop corporate information such as e-mail, calendars and employee directories, while they are in and out of the office.

Nokia One is convenient, flexible, and easy-to-use with nearly anytime and anywhere access;

- Global geographical coverage
- Several messaging methods available (SMS, WAP, Voice and web)
- Compatible with a high degree of security
- Simple to install and deploy

Most importantly, Nokia One works with what your employees have today – a mobile phone and existing desktop applications.

Access your email using SMS with Nokia One Mobile Connectivity Service

Send text message M to the Nokia One number.

You will shortly receive a text message containing a list of new e-mails in your inbox. It will look something like this. Scroll down the text message, the headers of the first four or five mails will appear in this message. If the list is longer than one text message, it will be divided into several text messages or "pages". The figure in the beginning of the response, for example 1/3, shows how many pages there are in the entire list; three in this case.

To get the next part of the list, send text message next to the Nokia One number.

If you want to read for instance the second e-mail in the list, send a text message with its number, in this case 2 to the Nokia One number.

You will then receive a text message with the first 160 characters of the e-mail. Again, the figure at the top shows how many pages long the e-mail is.

You can then send message next to get one text message more, or all to get all the remaining messages. Sending all will return at most 10 text messages at once.
