

## User Guide for downloading the latest system software to a Nokia Mediamaster

### 1 INTRODUCTION

This document describes how to download the latest system software to your Nokia Mediamaster.

### 2 ENVIRONMENT

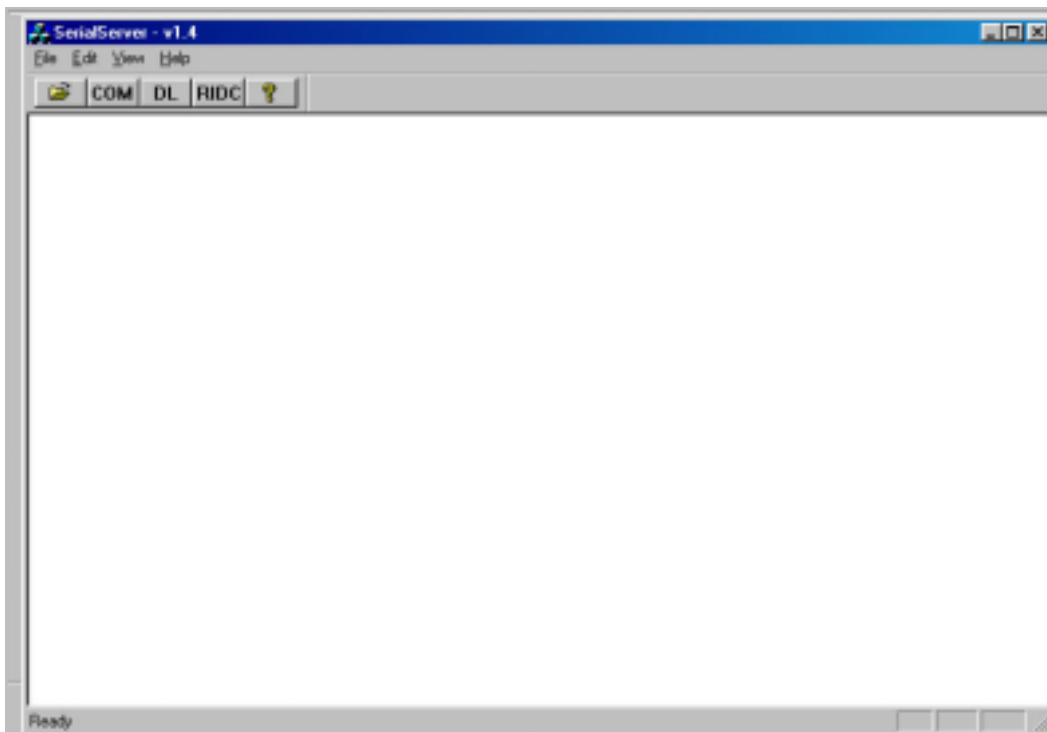

A null-modem serial cable connected to your host computer.

### 3 BEFORE YOU START

- Power-OFF your Nokia Mediamaster (disconnect from 220V).
- Connect the null-modem serial cable from PC to your Nokia Mediamaster

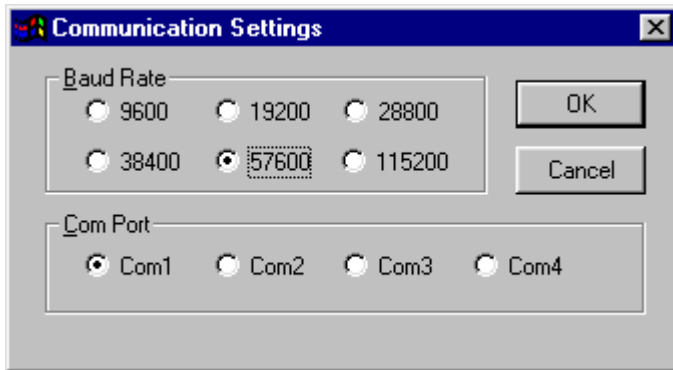

### 4 SETTINGS

- Save the Mediamaster Software into a new directory/folder of your PC (i.e. SW150\_1\_1.zip). Unzip the program.
- Save the download program into the same directory as the Mediamaster software.
- Start the download program (SerialServer -v1.4.exe).  
The following picture should appear on the screen.

## 4.1 Configuration of the serial port

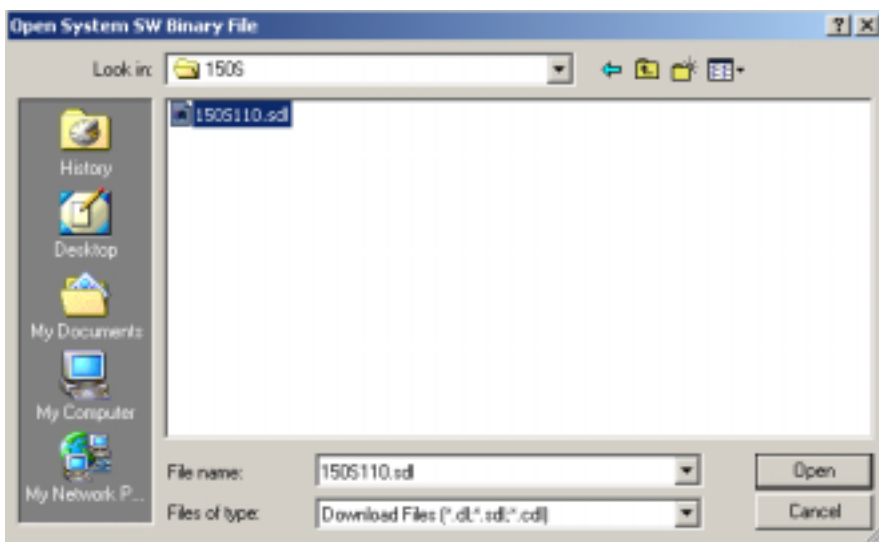

Settings for the serial port are done by selecting in menu bar Edit → Com Port Parameters or pressing COM. The serial port settings in the terminal program should be identical to the following picture, only the Com Port part should be changed to match the configuration of the PC that is used. Then confirm by pressing the OK button.

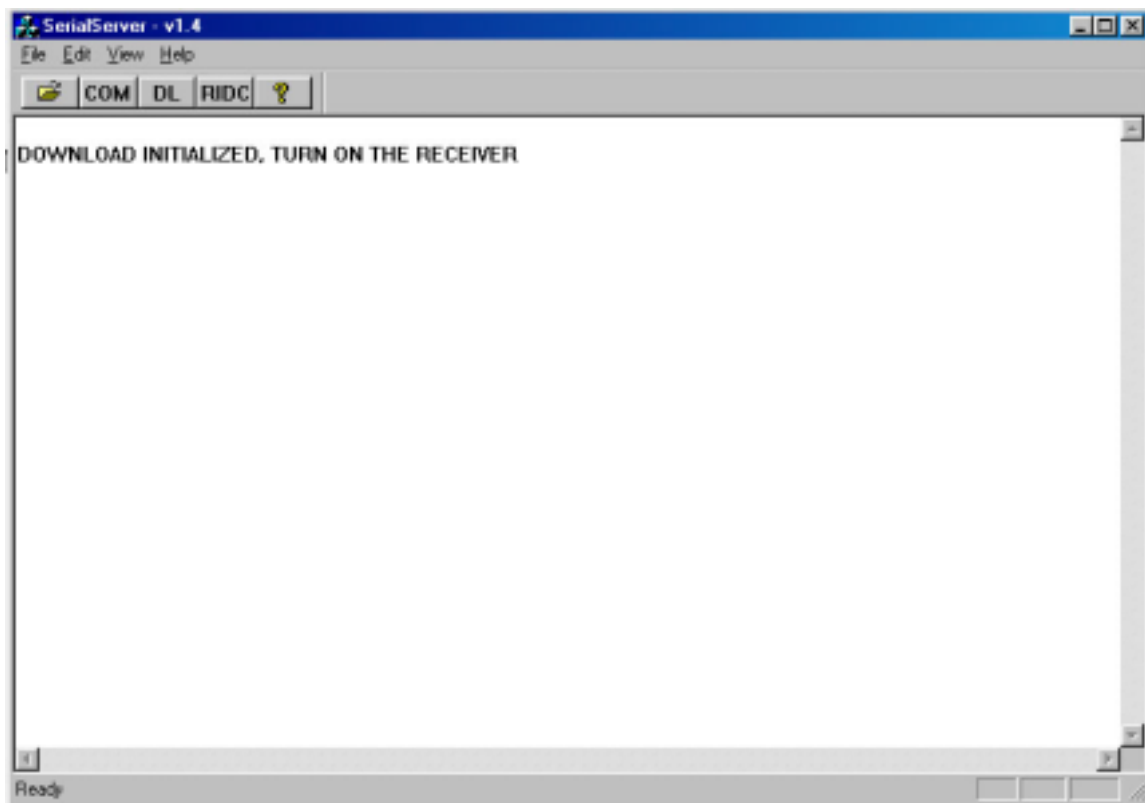

## 5 DOWNLOADING SOFTWARE TO NOKIA MEDIAMASTER

### 5.1 Selection of downloaded system Software file

Select in the menu bar File → Open. In the window select the Mediamaster software file and press the Open button.

Then start the download process by pressing DL-button.

Now Power-ON your Nokia Mediamaster receiver (connect to 220V) and the download process will commence. Both LEDs will blink green during the download. It is advisable not to use any other applications on the host PC during the download process.

The download will take approximately 6 minutes. On completion, the message "Download completed" is shown.
