

## Nokia IP Security Solutions Upgrade Program

Make it your business  
to find out more.

Enable easily managed,  
secure and reliable connections.

### Security is a business decision

Your business needs are clear and critical to secure. To sustain network integrity and performance, you may need to go to the next level.

Do you want to simplify your migration to the next version of Check Point® software or leverage the ROI associated with deploying security appliances?

### Now your upgrade path makes business sense too.

When you upgrade any existing platform running Check Point™ VPN-1®/FireWall-1® or Internet Security Solution's RealSecure® intrusion detection network sensor to the following Nokia IP Security Platforms - **Nokia IP350, IP380, IP530, IP710 or IP740**, you will save **thousands of dollars**.

Make it your business to find out more by contacting your local Nokia representative or call 1-877-997-9199.

### Nokia IP Security Platforms deliver on the promise of a security appliance

Nokia IP Security Platforms provide secure, reliable and manageable connections, and save time and money in deployment and resource allocation. Combined with VPN and security software, the latest generation Nokia IP Platforms are business enabling and future proof.
