NOKA CONNECTING PEOPLE

Nokia: The Preferred Platform of Check Point

heck Point has chosen Nokia as the Preferred Platform on which to operate its market-leading suite of Internet security software. Building on the two companies' unmatched history of cooperation and innovation, Nokia and Check Point have recently embarked on an expanded global alliance and are committed to continued leadership in both the wired and mobile Internet markets.

Both organizations tightly align their strategies, engineering, innovation priorities, and resources at virtually all business levels, producing a solution of unbeatable appeal. Nokia provides a range of purpose-built platforms—from distributed office environments to multi-Gigabit data center needs— along with rapid deployment management tools and support services. Check Point provides the VPN and firewall applications, and security management. This results in market-leading security applications offered with the Nokia IP Security Platform Advantage—pre-installed, pre-configured appliances tuned for reliability, performance, and rapid deployment—and designed from the ground up for secure connectivity.

Cooperation in Action

The Nokia Firewall Flows feature is the most visible example of the Nokia and Check Point joint development efforts. Firewall Flows incorporates elements of Check Point's SecureXL performance API to reduce per-packet overhead. This dramatically increases the performance of Check Point FireWall-1® operating on the Nokia IP Series.

Nokia and Check Point are also undertaking a series of high-availability and performance enhancements based on combining the patented Nokia CryptoCluster™ technology and Check Point SecureXL technology. Nokia platforms running Check Point security software have won a number of

industry awards in the recent past:

- Best Corporate Firewall—Network Computing, July 2001
- Well-Connected Award, Best Enterprise Firewall System—Network Computing, May 2001
- Editor's Choice—Network News, April 2001
- Real World Labs Best Marks—Network Computing Germany, March 2001
- Firewall of the Year—Network Industry Awards at Network Telecoms UK, June 2000
- Well-Connected Award—Network Computing, May 2000
- Best Security Hardware—Secure Computing, May 2000
- Best Firewall—Secure Computing, April 2000
- Editor's Choice Award—Network Computing, April 2000

The Future

Today Nokia and Check Point already protect the perimeter of mobile networks worldwide, and are collaborating in the mobile network security area to address the unique security needs of operators deploying 2.5G and 3G networks.

Five years of partnership have created a tradition of innovation and success for Nokia and Check Point. The two companies have a unique record of close cooperation that has been duly rewarded by the marketplace. It is a legacy worth building on, and with each new award granted to Nokia and Check Point for product excellence, the industry continues to recognize the unmatched power of this partnership—power that can work for your enterprise.

at-a-glagane

product benefits

- Nokia/Check Pointdeveloped Firewall Flows maximizes performance
- Easy deployment with custom-built platform, pre-licensed software
- Complete family serves distributed offices to multi-Gigabit datacenters

opsec integration benefits

- Easy compatibility with complementary security products
- New technologies have affinity to existing OPSEC offerings
- Widespread acceptance strengthens customer confidence

"Check Point has chosen the Nokia IP Series as the Preferred Platform for Check Point's extensive suite of security software."

Gil Shwed, CEO and Chairman, Check Point Software
