

Quick Guide to Using the Nokia 6210 with Dial-Up Networking

1. Installing and setting up

First you have to create a new connection for The Nokia 6210. Choose the **My computer icon** → **Dial-up networking** → **Make a new connection**. This opens a Window where you can choose the right modem and name the connection (Figure 1).

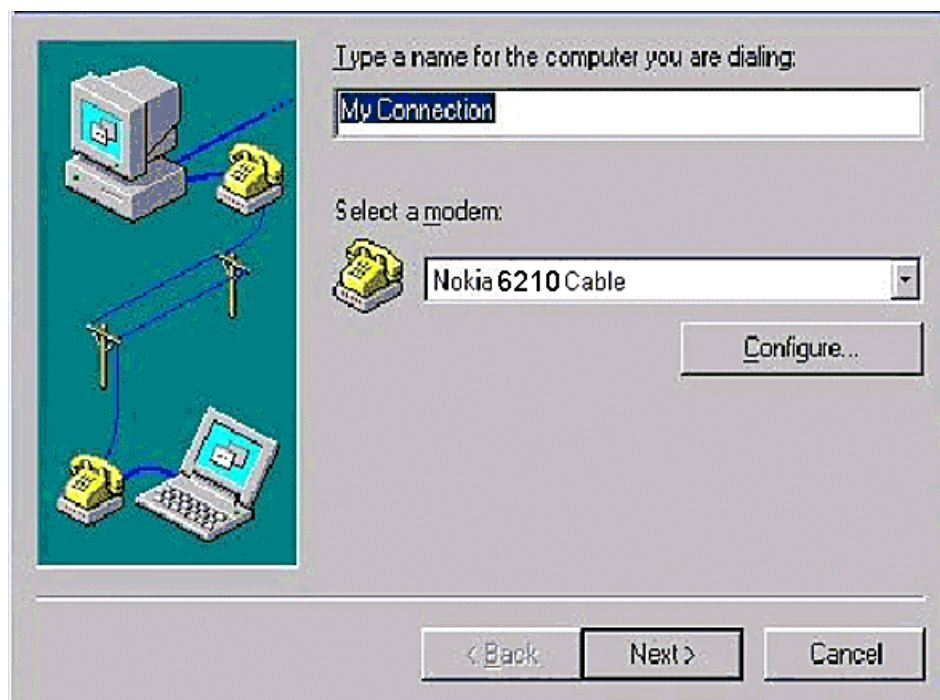

Figure 1. Making a new connection.

Enter a name for the connection and choose either *Nokia 6210 Cable* or *Nokia 6210 IrDA*, click **Next>** and enter the correct number which you have obtained from your provider; also choose the correct area and country codes (Figure 2). Choose **Next>** to continue.

Figure 2. Number and codes.

Choosing the **Finish** button will close the setup and create an icon for the dial-up networking folder (Figure 3).

Figure 3. Finishing the creation of a new connection.

Click the newly created icon with the right button of the mouse and choose Properties. This will open a general information box for this connection (Figure 4). (**NOTE:** If you are going to connect to an ISDN number you must add the following line to the extra settings option: S35=0. This can be done by choosing **Configure... → Connection → Advanced... → Extra settings**). If you want to change this connection to a "normal" line please remember this. The same procedure applies if you want to use a 14.4-Kb/s data line, only the AT command is different. To enable the transmission of 14.4 Kb/s data please type +CBST=14 instead of S35=0.

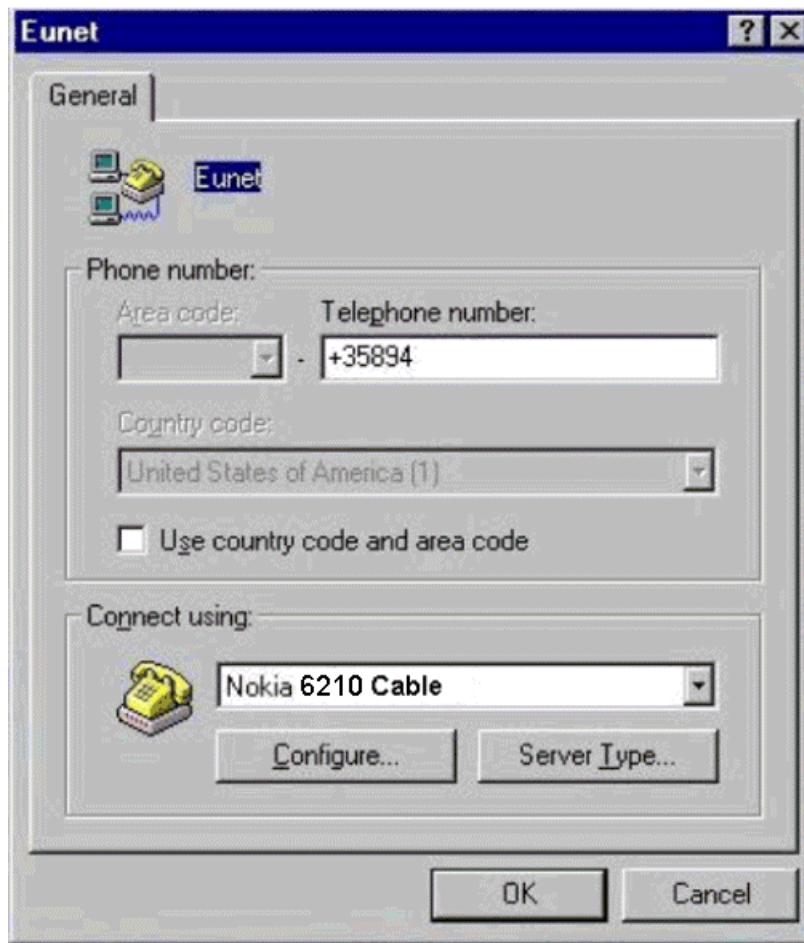

Figure 4. General settings.

Under the **Server Type...** button select the appropriate settings according to those you received from your ISP... (Figure 5).

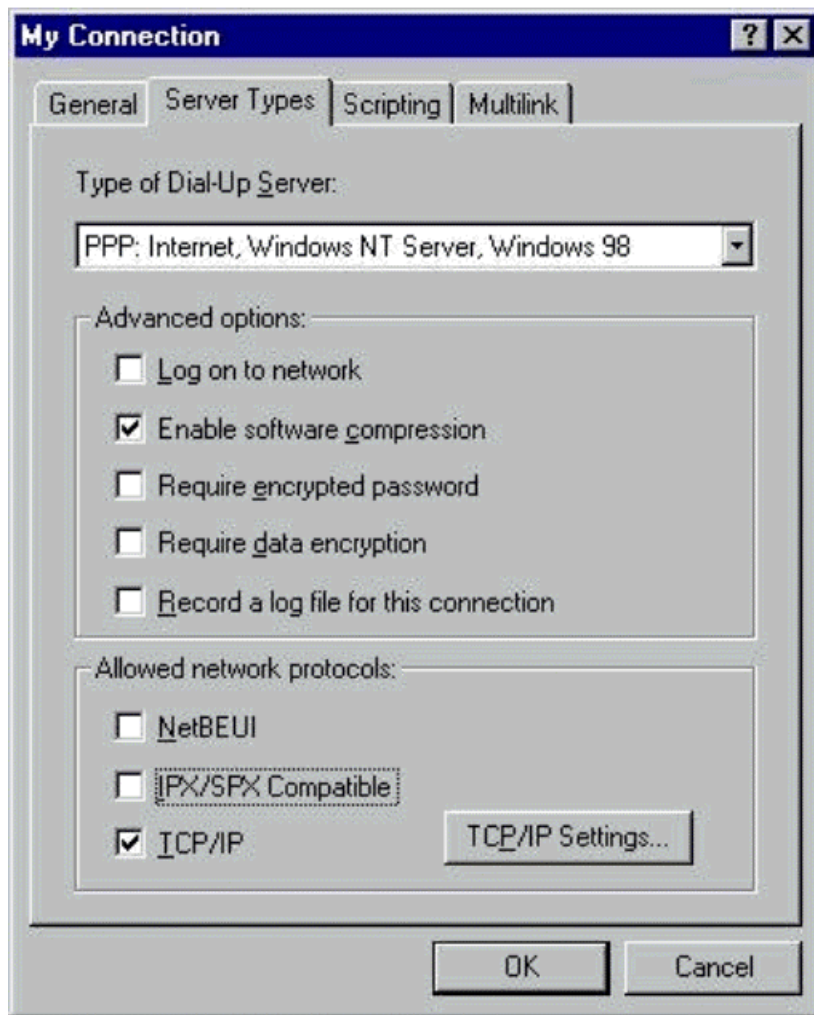

Figure 5. Server types.

Choose the **TCP/IP Settings...** button; then you may need to add all the settings which you have received from your ISP (Figure 6). Please check if you can use *Server assigned IP address* as well as *Server assigned name server addresses*. When you have selected all the necessary settings, close the window by choosing the OK button.

TCP/IP Settings [?] [X]

☒ Server assigned IP address

☐ Specify an IP address

IP address: 0 . 0 . 0 . 0

☐ Server assigned name server addresses

☒ Specify name server addresses

Primary DNS: 131 . 228 . 21 . 47

Secondary DNS: 131 . 228 . 240 . 241

Primary WINS: 131 . 228 . 31 . 28

Secondary WINS: 0 . 0 . 0 . 0

☒ Use IP header compression

☒ Use default gateway on remote network

OK Cancel

Figure 6. TCP/IP settings.

1.1 Making a connection

Double-click the icon that you have just created. Add the username and password information (you will get these from your service provider). When you open this connection, you can choose Save password to save the password for the next time (so you do not have to retype the password). Start to establish the connection by clicking **Connect** (Figure 7).

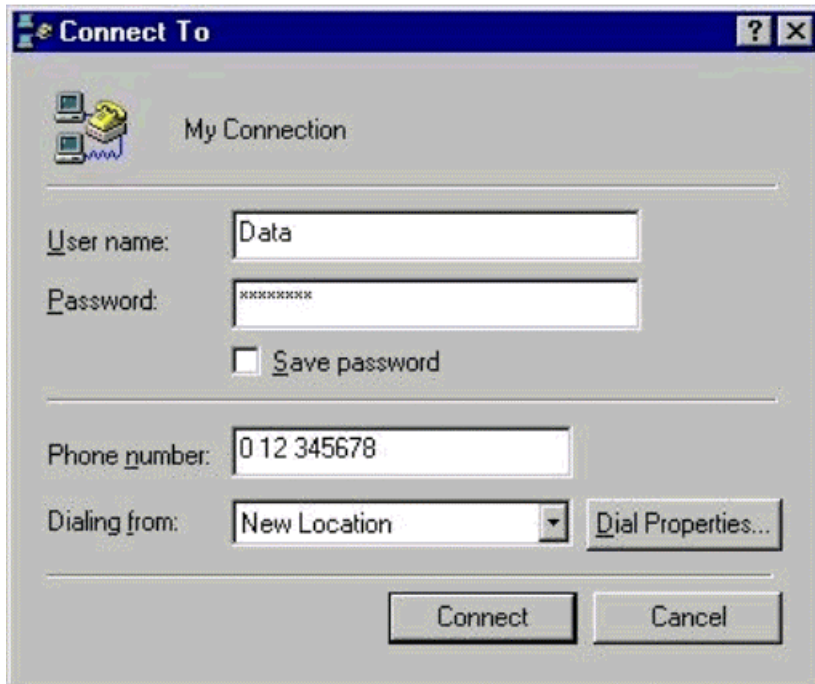

Figure 7. Connect to...

When you have clicked the **Connect** button, the computer should start to dial the number that you have specified in the set-up for your Internet service provider (Figures 8-10).

Figure 8-10. Making a connection...

When the connection is established a modem icon will appear in your taskbar (with two flashing red/green dots in it) and it is then possible to open, for example, Netscape or Internet Explorer to browse the Internet.
