Share online

You can share your images and video clips in compatible online albums, weblogs, or other compatible online sharing services on the web. You can upload content, save unfinished posts as drafts and continue later, and view the content of the albums. The supported content types may vary depending on the service provider.

Get started

You must subscribe to the service with an online image sharing service provider. You can usually subscribe to the service on the web page of the service provider. For details on subscribing to the service, contact your service provider. For more information on compatible service providers, see www.nokia.com/support/sharingandblogging.

When you open the service for the first time in the Share online application, you are prompted to go online and download the list of service providers. To activate the service, select the preferred service provider. To access the account settings later, select **Options > Settings > My accounts**.

Upload media files

In Photos, select **Captured**, the files you want to upload, and **Options > Send > Post to web**. You can also access online services from the main camera.

To create a new account for a service, select **Share online**, a service, and **Options > Add new account**.

When you select a service to upload media files, you can capture a new image or video clip, select from existing images and video clips, and add a title, tags, and a caption to them.

To connect to the service and upload the files to the web, select **Options > Post to web**, or press the call key.

To cancel the web upload process and save the created post as a draft, select **Back** or **Cancel > Save as draft**.

Open online service

To view uploaded images and video clips in the online service, and draft and sent entries in your

device, select **Photos > Share online**. If you create a new account offline or modify an account or service settings through a web browser on a compatible PC, to update the service in your device, select the service and **Options > Update service**.

After you open a service, select **Options** and from the following:

- **Go to webs.** — to open the browser and start the connection to the selected account
- **Outbox** — to open the Outbox for the selected account
- **Recent posts** — to view the 20 latest entries created through your device
- **New post** — to create a new entry

The available options may vary.

Share online settings

To edit the settings for your accounts in Share online, select **Share online > Options > Settings**.

My accounts

In My accounts, you can create new accounts or edit existing accounts.

To create a new account, select **Options > Add new account**.

To edit an existing account, select an account and **Options > Edit**.

Select from the following:

- **Account name** — to enter a name for the account
- **User name** — to enter the user name you created for your account when you registered to the online service
- **Password** — to enter the password you created for your account when you registered to the online service
- **Image posting size** — to select the size in which the images are uploaded to the service

Service providers

- **Service provider** — to view the details of a service provider. You cannot change the service provider for an existing account; you must create a new account for the new service provider. If you delete an account in My accounts, the services related to the account are also deleted from your device, including the sent items for the service.

Application settings

Select **Share online**, a service, **Options > Settings > Application settings** and from the following:

- **Display image size** — to select the size in which the image is shown on the display of your device. This setting does not affect the upload image size.
- **Display text size** — to select the font size for your text.

Advanced

Select **Share online**, a service, **Options** > **Settings** > **Advanced**, and from the following:

- **Default access point** — to change the access point used to connect to the online service
- **Download interval** — to select the interval for background downloading, or to turn off background downloading
- **Download while roaming** — to select whether to allow background downloading while roaming
- **Publish all image data** — to select whether to publish image data
