>
> | | |
> |---|---|
> | Nokia Data Suite 1.0 | Nokia GSM Data-Fax |
> | Nokia Data Suite 1.2 | Nokia GSM Data-Fax |
> | Nokia Data Suite 2.0 | Nokia GSM Data 2.0 |
> | Nokia Data Suite 3.0 | Nokia GSM Data 3.0 |

Quick Guide to Using the Nokia Data Suite with Dial-Up Networking

1. Installing and setting up

First you have to create a new connection for The Nokia Data Suite. Choose the **My computer icon → dial-up networking → make a new connection.** This opens a Window where you can choose the right modem and name the connection (Figure 1).

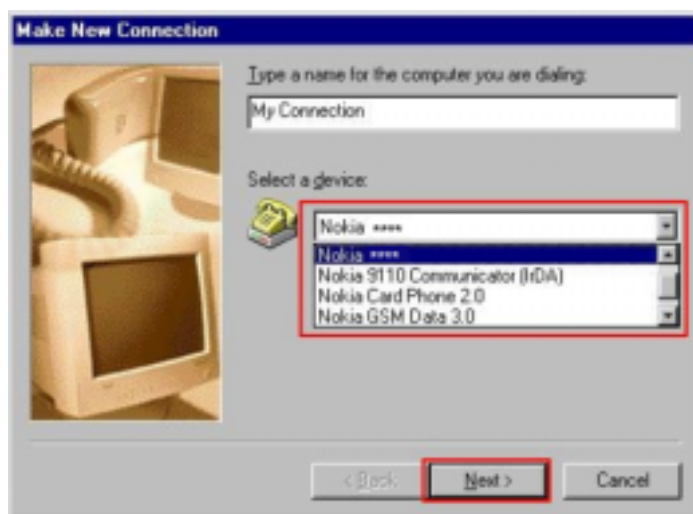

Figure 1. Making a new connection.

Enter a name for the connection and choose the appropriate modem, click **Ne<u>x</u>t>** and enter the correct number, which you have obtained from your provider; also choose the correct area and country codes (Figure 2). Choose **Next>** to proceed.

Figure 2. Number and codes.

Choosing the **Finish**- button will close the setup and create an icon for the dial-up networking folder (Figure 3).

Figure 3. Completing the creation of a new connection.

Click the newly created icon with the right button of the mouse and choose the properties (Figure 4). (**NOTE:** If you are going to connect to an ISDN number you must add the following line to the extra settings: S35=0. This can be done by choosing **Configure**… → **Connection** → **Ad̲vanced**… → **Extra settings**). If you want to use this connection to a "normal" line as well please make a note of this.
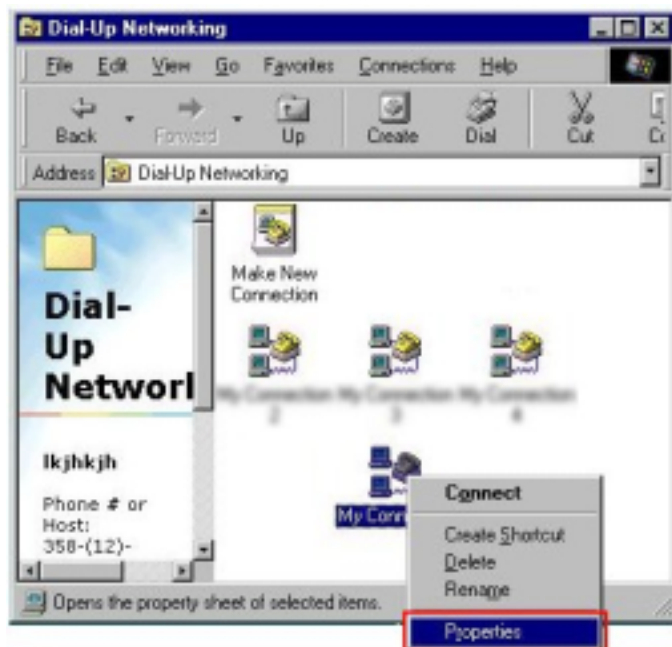

Figure 4. Entering the general settings.

Under S**erver Type**, please select the advanced options as required, e.g. if you are dialing your company's Intranet then you must select "Log on to network" (Figure 5).

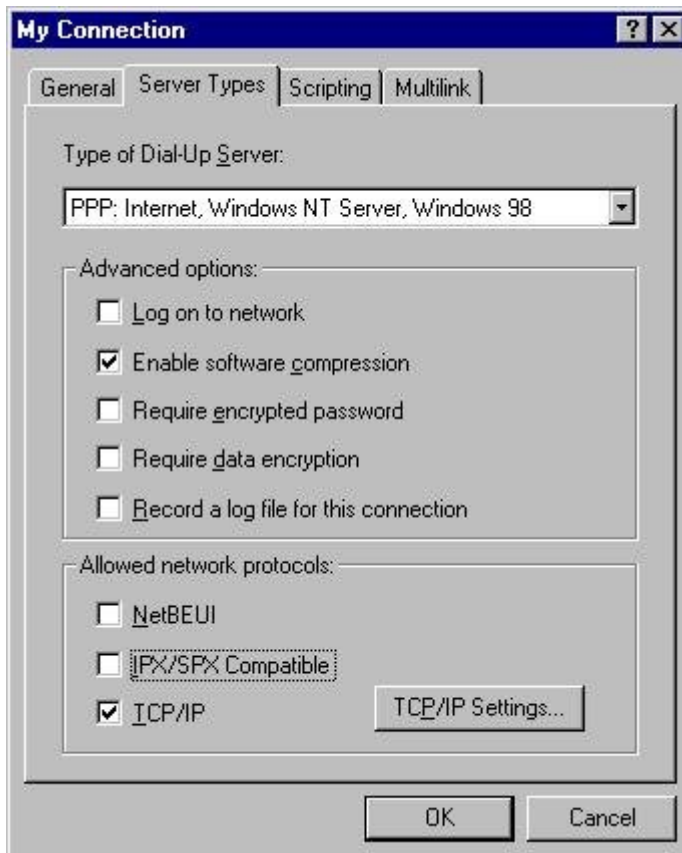

Figure 5. Server types.

NOKIA

1.1 Making a connection

Double-click the icon that you have just created. Add the username and password information (you will get these from your service provider). When you open this connection, you can choose to save your password for the next time (so you do not have to retype it). Start to establish the connection by clicking **Connect** (Figure 7).
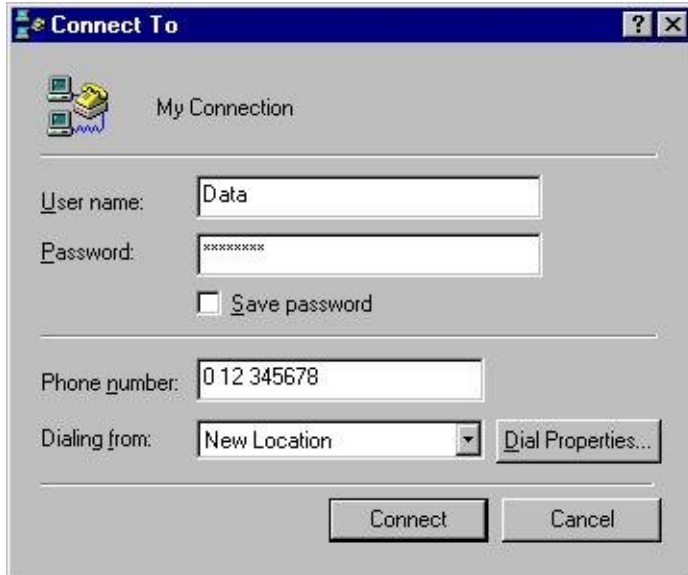

Figure 7. Connect to...

When you have clicked the **Connect** button, the computer should start to dial the number that you have specified in the setup for your Internet service provider (Figure 8).
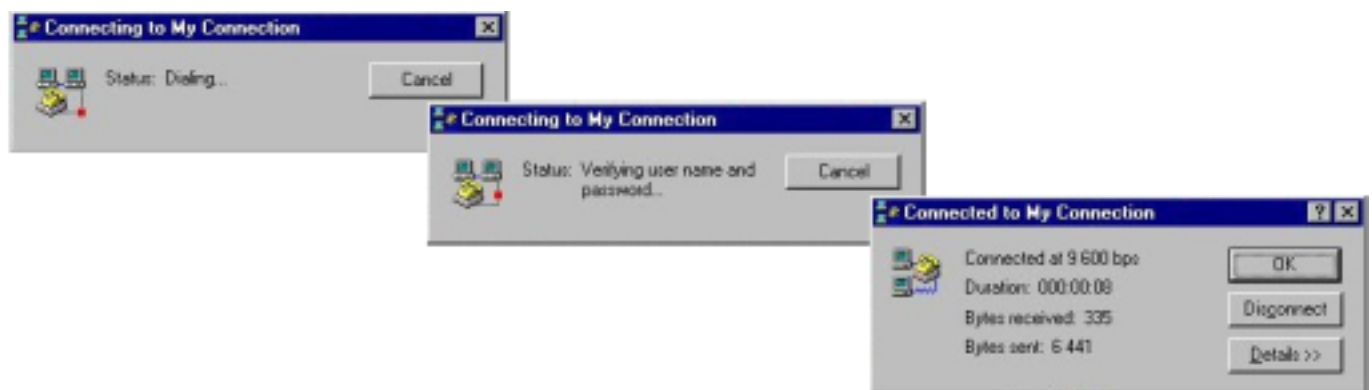

Figure 8. Making a connection...

When the connection is established a modem icon will appear in your taskbar (with two flashing red/green dots in it) and it is then possible to open, for example, Netscape or Internet Explorer to browse the Internet.
