

This Quick Guide is a generic guide for Nokia 8810, Nokia 8850, Nokia 8890 and Nokia 8210.

## Quick Guide to Using your Nokia Phone with Remote Access in a Macintosh Environment

First check that you have at least Mac OS 8.6 (Figure 1).

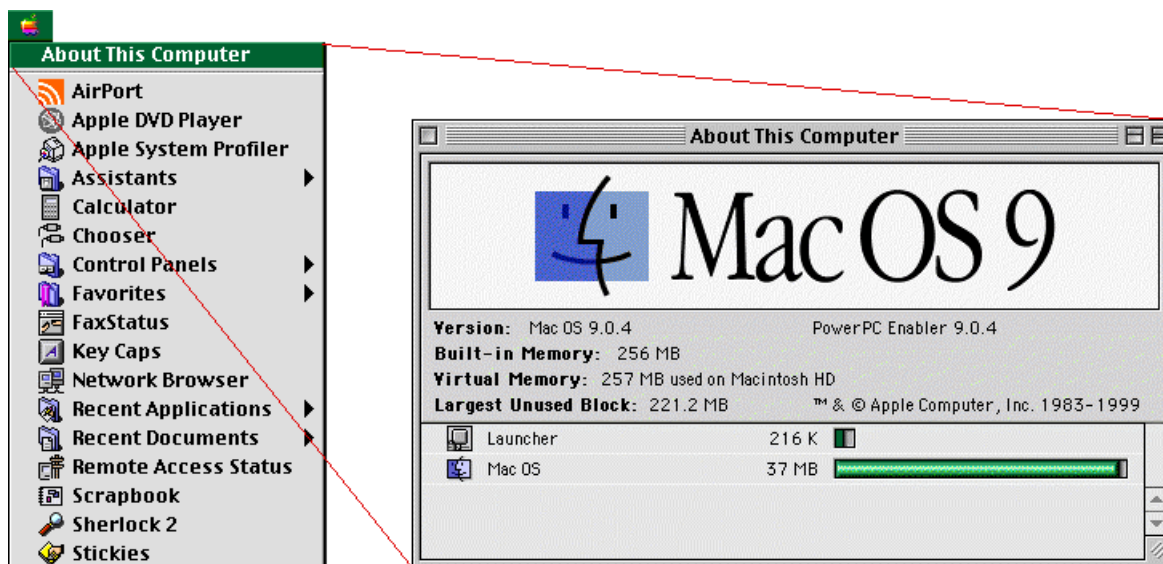

Figure 1. Checking Mac OS version.

### 1. INSTALLING AND SETTING UP

First you have to create a new connection for your Nokia phone. Go to your Macintosh system drive and then to the Internet folder. In the Internet folder choose Internet Setup Assistant and fill in all the necessary fields according to the documentation you received from your Internet Service Provider.

The figures below outline the most important things to check for when making a new connection.

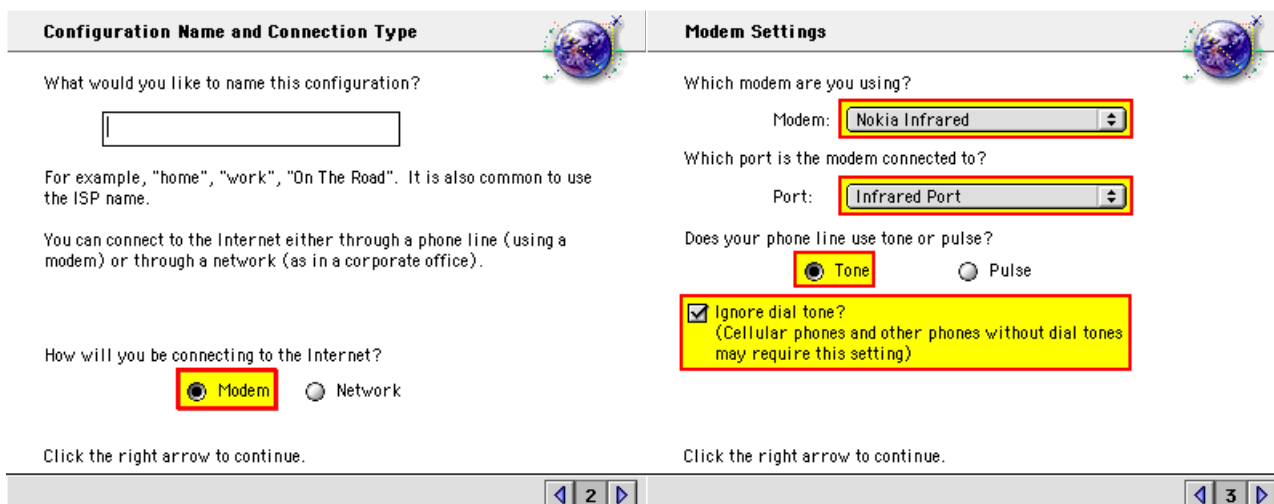

Figure 2. Check that you have **Modem** selected.

Figure 3. Check that you have made all the settings as shown.

## 2. MAKING A CONNECTION

Go to the Control Strip and select from the Remote Access the connection that you just made (Figure 4).

Click here to get a list of available connections

Figure 4. Selecting which connection to use.

When you have clicked on the connection that you have just made, the connection will become Active. Now click once again on the Remote Access and now select *Connect*. You will not see anything while the connection is being made but after the connection has been successfully established the Apple logo will start to flash and also the time starts to run in the Control Strip. You can view details about your current connection by selecting *Remote Access Status* from the Apple menu.

If something goes wrong then you should check that you have the Infrared activated in your phone and that it is pointing at your Macintosh Infrared port. Then check the status of the AppleTalk (Figure 5).

Click here to check that AppleTalk is Inactive. If not then make it inactive.

Figure 5. Checking AppleTalk status.

In some cases you may need to restart your computer to make changes effective. If you have mistyped your ISP telephone number you can change it from the Remote Access menu in the Control Strip. In the Remote Access menu select *Open Remote Access* and you will get a window which provides you with details of your current connections, such as your user name, password and number to call.
