Nokia Data Suite 3.0	Nokia GSM Data 3.0

Quick Guide to using the Nokia Data Suite with a 16-bit communication application

This Quick Guide assumes that the Nokia Data Suite is already installed on your computer.

1. Installing and setting up

To find out which port the Nokia Data Suite is using, open the Win95/98 Device Manager (**Start ->Settings ->Control Panel ->System ->Device Manager**) and look at the Ports (Com&LPT) entries. (You might have to double-click on Ports (Com&LPT) to see all of the ports.) Specify the appropriate modem in your communication application (Figure 1). In this example NDS is physically connected to COM1 (the setup program shows this port). The setup program creates a virtual port, COM3, for NDS and you must use this virtual port in 16-bit communication applications.
