## 1. INSTALLATION AND PAIRING

Select the application fitting to your phone model and install the application to your mobile phone before you connect the mobile phone to the Nokia 810 car phone, the Nokia 610 car kit phone, or the Nokia 616 car kit. Follow the installation instructions, provided at <http://www.nokia.com/enhancements/616>.

Make sure that the contact download application is running when you first pair your mobile phone with your car phone or car kit. You can obtain a list of active applications with a long press on the Series 60 menu key. To pair the devices, follow the user guide of your car kit or car phone.

If you have previously paired the mobile phone with your car kit or car phone, delete the pairing in the mobile phone. Pair the devices again with the contact download application running.

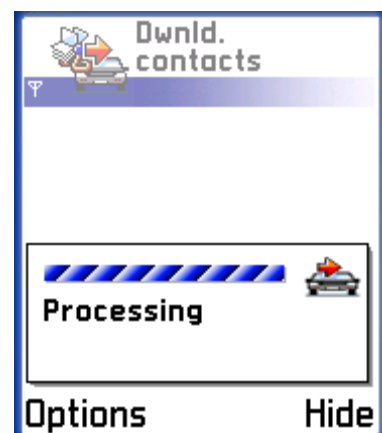

Select whether you want the application to start automatically when you switch on the phone.

## 2. CONTROL OF THE APPLICATION

If the application is not running, start the application from the menu.

The contact download application normally runs in the background mode. You can bring it to the foreground with a long press on the menu key and selection of the contact download application. To send the application to the background again, select Hide with the right selection key.

When the application is in the foreground, you can control it with the left selection key:

- Help: access a short help text.
- Options: select whether the application starts automatically when the phone is powered on.
- Exit: terminate the application.
